SUMMARY

Results-driven Data Analyst proficient in **SQL**, **Python**, **Power BI**, and **Advanced Excel**, with **7** end-to-end analytics projects spanning **1M+** row datasets, automated reporting pipelines and interactive dashboards. Skilled in transforming raw data from multiple sources into KPI-driven insights that support operational and business decisions. Currently delivering data-backed process improvements across **7+** insurance systems at Sagility, tracking **50+** daily claim cases, and seeking to grow further as a Data Analyst.

TECHNICAL SKILLS

- **Advanced Excel:** VBA & Macros, Power Query (ETL), Power Pivot, DAX, Data Validation, Advanced Formulas, Pivot Tables
- **Python:** Pandas, NumPy, Matplotlib, Seaborn, Rolling Window Calculations, Exception Handling, Exploratory Data Analysis (EDA)
- **Statistics & Analytics:** Correlation Analysis, Basic Time Series, Trend & Pattern Identification, Predictive Modelling, KPI Tracking
- **Databases & BI Tools:** SQL, PostgreSQL, Power BI, Query Optimisation, ETL Processing, Data Modelling, Reporting
- **Automation & Integration:** Excel VBA, Outlook Email Automation, Office Scripts, Power Query Refresh, Data Pipeline Scheduling

DATA ANALYTICS PROJECTS

Apple Retail Sales Analysis (SQL, 1M+ Rows)

[GitHub](#)

- Wrote **20+** advanced **SQL** queries (CTEs, window functions, complex joins) across **5** normalised tables in **PostgreSQL**; created targeted indexes validated with **EXPLAIN ANALYZE** to optimise query performance on **1M+** rows.
- Revealed that **75%+** of lifetime units (**4.23M+**) sell after the **18-month** launch window, and that Accessories carry a disproportionate warranty claim rate (**783** claims vs **26,797** sales) — informing post-launch inventory and aftersales strategy.

E-commerce Sales Dashboard (Power BI)

[GitHub](#)

- Designed a **Power BI** data model connecting **2** source tables via **Power Query** ETL and **10+** **DAX** measures to surface **438K** in sales, **37K** profit, and **5,615** units across **3** product categories and **5** regions.
- Implemented **6+** slicers with quarter and state drill-down, revealing COD as the dominant payment mode (**44%**) and Printers as the top profit sub-category — enabling self-service reporting and eliminating **2–3 hours** of weekly manual effort.

Hotel Booking Cancellation Analysis (Python)

[GitHub](#)

- Processed **119,000+** booking records using **Pandas**; applied **rolling window calculations** to track cancellation trends over time and **descriptive statistics** segmented by market type, lead time, and hotel category — surfacing a **37%** overall cancellation rate.
- Applied **correlation analysis** between ADR and cancellation risk; established Group bookings cancel at **62%**, advance bookings over **160** days at **55%+**, producing 3 actionable signals with **exception handling** throughout to support dynamic pricing decisions.

Daily Invoice Report Automation (Excel VBA)

[GitHub](#)

- Automated end-to-end daily reporting using **Excel VBA**, integrated multiple **CSV data sources**, built a **Power Pivot data model**, and developed **VBA logic** to refresh Power Query, Data Model, and Pivot Tables with zero manual effort.
- Implemented **Outlook email automation** with dynamic recipient handling, fail-safe mechanisms, and **Windows Task Scheduler** for fully unattended daily execution, resolving real-world challenges including OneDrive file locks and async refresh timing.

Hospital Emergency Room Dashboard (MS Excel)

[GitHub](#)

- Cleaned and modelled multi-year ER data in **Power Query** and **Power Pivot** using **advanced formulas**, **named ranges**, and **data validation**; calculated **5** KPIs across **9** referral departments using **DAX** with workbook optimisation for performance.
- Delivered an interactive **Excel** dashboard with age, gender, and month slicers, enabling hospital staff to self-serve operational insights — removing analyst dependency for routine performance monitoring.

WORK EXPERIENCE

Sagility | Process Consultant & Reporting

Aug 2025 – Present

- **Collected, cleaned, and organized** denial and billing data across **7+** insurance systems; **analyzed data to identify patterns, trends, and anomalies**, surfacing actionable process improvement opportunities to support strategic decision-making at scale.
- **Developed and maintained reports to monitor KPIs** across **50+** daily claim cases with high accuracy; **assisted in improving data collection systems** to enhance data quality, consistency, and accessibility across the reporting pipeline.
- **Collaborated with cross-functional teams** to understand data needs; **presented findings and recommendations** clearly to **100+** healthcare stakeholders — accelerating payment reconciliation cycles and contributing to operational improvements.

OByZero | Intern, Founder's Office | Customer Operations & Data Handling

Jul 2025 – Aug 2025

- **Collected, cleaned, and organized** inventory datasets across **Excel** and Google Sheets; **analyzed data to identify sales trends** contributing to **250+** units sold within a single campaign, directly informing restocking and promotional decisions.
- **Assisted in improving data collection systems** by reconciling product listings across **2** platforms (Shopify and Flipkart), ensuring **100%** data accuracy and reducing pricing and stock discrepancies.
